For example, you may want to share precious photos, funny videos and other media files on your phone with your friends, or family members.. Another scenario is when you're demonstrating a mobile application via webinar, it will be quite necessary for you to share your screen with PC and make versatile presentations.. However, the phone screen is too small for too many people to view at one time This can be really troublesome.

Android users often need to share Android screen with PC in many scenarios from time to time.. Using an iOS mobile device or a Mac computer with OS X, users can mirror their displays on an Apple TV.
